**THE NEW Y-RIG ULTRASONIC WIRELESS METER WILL OPEN NEW PERSPECTIVES FOR AN EFFICIENT MANAGEMENT OF IRRIGATION WATER.**

BLAGNAC, France - Yzatec, an innovative company positioned in the ultrasonic sensor market, announces the introduction of its new Y-RIG ultrasonic irrigation water meter, with wireless capabilities in a robust and cost efficient design. Y-RIG will allow irrigation users to create intelligent water irrigation systems to reduce their operating costs.

Built around its efficient ultrasonic transducers and fully integrated electronics (ASIC), the Y-RIG ultrasonic product creates a real breakthrough in the irrigation metering market.

According to Alain Ramond, President and CEO of Yzatec, Y-RIG is a highly innovative approach for irrigation flow monitoring. It leverages the company expertise in ultrasonic high volume product design and includes the latest open wireless network technologies. Yzatec has integrated this new ultrasonic meter design with the leading SigFox communication layer, so users can benefit of the low cost of connected object network. It will provide irrigation customers the

benefits of almost real time water consumption data at an operating cost that is much lower than the traditional mechanical meters and proprietary networks. Yzatec wants to work with open solutions, to avoid locking customers into proprietary solutions.

"The Y-RIG solution enables customer to move quickly into intelligent irrigation networks, which are necessary to optimize the irrigation water management and reduce the operating costs " Alain Ramond said. "The irrigation market is changing very quickly, as new technologies are becoming available and we want to stay in the front line of innovation and continue to work with major irrigation customers to solve their challenges, as we have done in this program. "

**About Yzatec [www.yzatec.com](http://www.yzatec.com)**

Yzatec is a leading technology company in High Performances and Cost Effective sensors for a large range of industrial applications. Yzatec provides advanced piezo based products for the sensor market and has a complete line of ultrasonic sensors for flowmeters, heat meters and water meters as well as piezo based sensors for vibration and pressure sensing. Yzatec has an extensive background in creating sensor products for the large volume industries such as automotive, industrial, water market.
